VISION CORRECTION**

Johnson & Johnson VISION

Next-gen laser vision correction, next-day results and recovery¹

How **SILK™** works

Create

SILK™ uses the most precise laser eye technology called ELITA™ to gently create a small disc-shaped lens (called a lenticule) in the cornea after the eye is numbed

Remove

The lenticule is delicately removed through a microscopic incision

Reshape

The silky-smooth lenticule removal reshapes the cornea, correcting the eye to see clearly¹

VIBRANT VISION WITHOUT GLASSES OR CONTACTS¹

95%

20/20 vision or better in 1 month

86%

Slight to no difficulty driving at night
